Enmascaramiento

Mecanismo utilizado: enmascaramiento con vista y control de acceso - **Rol `soporte` (`NOLOGIN`):** rol de grupo que agrupa los permisos del área de soporte. - **Vista `v_clientes_soporte`:** transforma los datos al consultarlos con `LEFT`, `RIGHT`, `SUBSTRING` y `CONCAT`, sin modificar la tabla original. Muestra las dos primeras letras del correo y su dominio, y los últimos 4 caracteres del teléfono y del RFC. - **`GRANT` mínimo:** `USAGE` sobre el esquema y `SELECT` solo sobre la vista. - **`REVOKE ALL ON clientes`:** quita el acceso directo a la tabla original, así que la única vía es la vista. El enmascaramiento ocurre en la base de datos, no en la aplicación, por lo que se cumple sin importar con qué herramienta se conecte el usuario (mínimo privilegio).
